

Skillsets

Programming languages / Tools: C, C++, C#, HTML, CSS3, JavaScript, Typescript, Java, Git, SQL, Apex, SOQL, Python

Projects

Bus station | <https://github.com/InformacioniSistemiProjekatEducons/AutobuskaStanica>

- Worked with a colleague to develop a bus station management system.
- We created two types of users in the application, admin, and worker.
- Admin can add new workers and manage them. The worker can give tickets, see bus line statistics, add new lines and track passenger inventory.
- Platform: PC
- Technologies used: **Java**

Unity game | <https://github.com/danijelmiklosi01/UnityGame>

- Designed and built a Unity game.
- Game has a score and healthbar.
- Game is a 2d platformer and runner.
- Platform: PC
- Technologies used: **Unity, C# for scripts**

Univer Organa | <https://github.com/danijelmiklosi01/UniverOrganaProject>

- Designed and built a food store app.
- The application has access to the warehouse to add and remove items.
- It also has undo and redo and review of orders by the kitchen.
- When a user whose role is chef logs in, he can view recipes and order items from the warehouse.
- It also has a quick search for items by name.
- Platform: PC
- Technologies used: **.NET, C#, WPF**

Internship project User Management Application at TIAC

- Designed and built a User Management Web Application.
- This application has two roles admin and user.
- Admin can add, view, edit and delete user profiles and team details. Including updating user information and assigning users to specific teams.
- Users and teams are presented with detailed profiles.
- The application features filtering and sorting options for both user and team data. Users can filter tables based on multiple attributes.
- Users have option to export tables to Excel format.
- The application employs Keycloak for user authentication, for having a secure and reliable login system. Keycloak provides advanced security features, enhancing the overall safety of user data.
- Technologies used: **.NET Core Web Api, Angular, Keycloak**

Internship project Timesheet Application at Intermino | <https://github.com/danijelmiklosi01/TimesheetApp>

- Designed and built a Timesheet application.
- Application has an employee and manager visualforce page.
- Employees can add new timesheets.
- Manager can remove and edit timesheets, add new projects, etc.
- Platform: PC, Mobile
- Technologies used: **Salesforce, Apex, SOQL**

Education

Educons University, Information Technology Engineering - Expected year of graduation: 2024

Experience

Completed Salesforce Internship at Intermino (2022) | [Internship Certificate](#)

Completed Cloud Internship (AWS,GCP) at Devoteam (2022) | [Presentation of my work at Internship](#)

Completed Full-stack developer Internship (.NET, Angular) at TIAC (2023)
